## INTRODUCTION

This document is a report on your behavioral style.

Assessment System DISC INSUNRISE® is based on the behavioral model developed by the American scientist PHD, Doctor William Moulton Marston of Harvard University (May 9, 1893- May 2, 1947).

In 1928 Dr Marston published "The Emotions of Norman People" in which he described the DISC theory. The main concepts of this theory are the foundation of the DISC Behavioral Model.

Thousands of scientific experiments and tests based on the DISC model have been carried out. These tests proved that individuals possess both unique characteristics and common patterns. The common patterns help to measure and define individual style of personal behavior.

Research shows that behavioral style cannot be "good" or "bad". Each person can be successful and efficient if he understands his own strengths and weaknesses. DISC INSUNRISE "Individual Style Report" does not grade personal behavior but only describes and measures it.

Better self-awareness may help you to improve your interaction with the others and better adapt to the environment.

Treat the Behavioral Style Report in a creative way. Just cross out the statements you disagree with but only after consulting with people you trust- your friends, relatives or colleagues. You may not be aware of some traits of you character!

Try to create your own Personal Development Plan based on this survey.

Use only professional tools!

## DISC Behavior Style - Instructions for Reading Graphs

### NATURAL AND ADAPTED BEHAVIOR

This individual report is based on the interpretation of Graphs of Natural (II) and Adapted (I) behavior.

### GRAPH I

Graph I represents our "Professional mask" or the behavioural style that we wish or consider appropriate to show to other people. Adapted behaviour is less intuitive and may be either in the line of or Natural behavior or be quite close to it.

Graph I measures an ability of an individual to adapt his behaviour consciously to particular situations. If you ask a candidate to fill questionnaire keeping in mind not his work, but his family life, where he (she) is performing the role of a father (mother), Graph I will reflect his (her) behavior which he (she) considers to be adequate to be successful in this role. Graph I can change much more easily and quickly than Graph II. To a certain extent, we all adapt our behaviour to the environment, work situations included.

### GRAPH II

Graph II describes less conscious instinctive behaviour of an individual. This Graph is more informative and reflects our true image that is what he (she) really is when he (she) does not try to control himself (herself). In normal conditions, Graph II changes very little in time. However, some event or accident, which can give rise to strong emotions in a person, may change the shape of Graph II, e.g. a serious surgical operation, a car crash, changes in a family life, the loss of a job, etc. The price we pay for the adaptation of our behaviour is our energy. The following should be kept in mind:

- Long term behavioural adaptation may exhaust one's energy.
- If a person is seriously motivated to adapt his (her) behaviour, he is able to conduct himself in accordance with the demands of the environment.
- To restore the energy supply a person has to turn back to his Natural style of behaviour.

Comparing Graph I and II you can judge of the difference between the person's self-perception and what his natural performance. When the gap between the Graphs is minimal, a person feels more energetic and dynamic and can fulfill different tasks for a long time, being under minimal or without stress at all.

Mindfulness directly affects the quality of decisions made!  
Be successful!
